Allestree. 1638.

A New Almanack and Prognostication, for the yeere of our Lord God, 1638.

Being the second after Leap yeere.

Calculated and properly referred to the Longitude and sublimity of the Pole Artick of 51. deg. and 32. min. And may generally serve for the whole Ile of Great *Brittain*.

Mutor pro temporum ratione.

By *Richard Allestree*.

Printed at London by T. Cotes, for the Company of Stationers.

Ad huius Libri Prognostici amici sui charis. Mr. R. Allestree Lectorẽ carmen Prognosticon.

ASTra prophetizo quamvis qu'd splendida signent,
Et ferat influxu quid vaga Ste lasuo,
Nulla superstitio tamen in me est, impia nulla,
Artes quæ doceo pagina saera probat,
Cuncta Deo subsunt, Cœlumq;, Solumq;, Salumq;,
Quæq; jubet facient Sidera, terra, mare:
Prima Deus causa est, causæ sunt Astra secundæ,
Nil si prima vetet, causa secunda valet.

H. B.

Ad amicũ suũ charissimũ R. Allestree de libro hoc prognostico.

ABdita Stellıferi reserans mysteria Cœli,
Quid signent nobis astra coruſca Poli,
Quid pluvias, ventos, tempestatesque sonorus,
Excitet, his pulsis, unde serena dies,
Illæsã pietate, doces; namque omnibus istis,
Cansam Causarum tu facis esse Deum.

R. W.

What dayes the Faires of the Burrough of Darby are kept this present yeare, 1638.

The first is upon Friday in Easter weeke.
The second, on the 4 and 5 of May.
The third, on Friday in Whitson-weeke.
The fourth, on the 22 of Iune, being Friday before Midsummer-day.
The fift, on the 25 of July, being S. Iames day.
The sixt, on the 26 and 27 dayes of September.

A neceſſary and perfect rule for ever to know when the 4. Termes begin and end: and how many Returnes are in every Terme.

Eight dayes before a Terme ſhall be,
The Exchequer openeth certainly,
Except the Terme of Trinity,
Which openeth but 4 dayes before aſſuredly.

1 Hilary Terme beginneth the 23 day of January (if it be not Sunday) but then the next day after, and endeth the 12 or 13 of Febꝛuary, and hath 4 Returnes.

Octabis Hilarij } { Craſtino Purificationis.
Quind Hillarij } { Octabis Purificationis.

2 Eaſter Terme beginneth 17 dayes after Eaſter, and endeth 4 dayes after Aſcention day, and hath 5 Returnes.

Quind. Paſchæ } { Menſe } { Quind Paſchæ.
Tres Paſchæ } { Paſchæ } { Craſtino Aſcentionis

3 Trinity Terme beginneth the next day alwayes after Corpus Chriſti day, and endeth the wedneſday fortnight after, & hath 4 Returnes. Note that Corpus Chriſti day is alwayes the Thurſday after Trinity Sunday.

Craſtino Trinitatis } { Quind. Trinitatis.
Octabis Trinitatis. } { Tres Trinitatis.

4 Michaelmas Terme begins the 9 of October (if it be not Sunday) and endeth the 28 day of November, and hath 8 Returnes.

Octabis Michael } { Craſtino Animarum
Quind. Michael } { Craſtino Martini
Tres Michael } { Octabis Martini
Menſe Michael } { Quind. Martini.

In my Calender following you ſhall finde both the beginning and endings of the Termes, and all the Returns ſet downe upon the dayes of the month that they fall upon this yeere, 1628.

Charles our Soveraigne King, did begin his raigne ober Great Brittaine, Anno 1625, March 27. and hath reigned 13 yeres compleat this yére, 1638, but the 27, day we wrote, Anno Dom. 14.

Veneris ſtella à Græcis φωσφορὸς & ἑσπερος à noſtris Lucifer ac veſper vell veſperugo nuncupatur.

This Golden planet Venus is Occidentall, from the firſt day of January this yeere 1638, unto the 23 of April following. & ſo long this yéere ſhe is our glittering Evening Starre, ſetting after the going downe of the Sun, and therefore termed Heſperus vel Veſper: that is, the Evening Starre. And all the reſt of the yeere elſe, ſhe is Orientall riſing before the Sunne in the morning, and therefore called Lucifer, & our glittering morning Starre, and ſo continuing all this yeere after.

A moſt plain and eaſie Table ſhewing the true time of the beginning, continuance, and yeares, ſince the reigne of each King & Queene in England, from the Conqueſt, vntill this yeare, 1638. Gathered forth of Chronicles, and ſet forth for profitable vſe of Lawyers, Scriveners, &c.

The Kinges names.	Began their reigne.	The time they reigned.	Since their reigne.

King Iames	1602 mar 24	22 ye. 3 mo. 6 d	013 March 27
King Charles	1625 mar 27	Whom God grant long to reigne.	

Note that each King began his reigne at the ſame time, that the next precedent King ended his.

The parts of mans body, which the planets do signifie of themselves.

Saturne.	Iupiter.	Mars	Sol.
Spleene Right eare, Bladder, and bones.	Lungs, ribs Liver, Gristles, Veade and Arteries.	Gall reines Left eare, veines, and Stones.	Sight, Heart, right side, marrow, Sinewes.
Venus.	Mercurius.	Luna.	
Kidneies, Sperme, Fatnesse, buttockes, genitals, matrix, pappes & throate.	Memorie, Tongue, Hands, Phantasie, Mouth, Sinewes, & shanbes.	Left eye viri, right mulieris, stomack, Leftside, Brest, wombpoint, and taste.	right eye viri, & the left eye mulieris. Mars & Venus, signifies the secrets of both sexes.

The twelve Signes are thus charactered.

Aries,	Taurus,	Gemini,	Cancer,	Leo,	Virgo
♈	♉	♊	♋	♌	♍
Libra,	Scorpio,	Sagit.	Capric.	Aquar.	Pisces
♎	♏	♐	♑	♒	♓

The planets thus, with the dragons head & taile.

Saturne,	Iupiter,	Mars,	Sol,	Venus
♄	♃	♂	☉	♀
Mercury,	Luna,	Caput drac.	Cauda drac.	
☿	☽	☊	☋	

The Aspects thus.

Conjunct.	Sextile,	Quadr.	Trine.	Oppositio
☌	⚹	□	△	☍

Dit sijn de teeckenen der Planeten.

☾ Luna **Middelbaer goet.** ☿ Mercurius, **middelbaer,** ♀ Venus, **goet.** ☉ Sol **middelbaer.** ♂ Mars **quaet,** ♃ Iupiter **goet,** ♄ Saturnus **quaet. Ende die oppositie ende quadrature zijn quaet: de conjunctie Trijn ende sextil zijn goet.**

Times of Marriage prohibited by the Church.

From { After Adventtijd. / After Septuagesi. / Ascention day. } Till { The 12 of Januarij. / 8 dayes after Easter. / Trinity Sunday. }

A true definition of naturall Astrologie by the Author.

Astrologia vera ac erudita physica pars est, inquirens proprietates, vires, effectus ac significationes stellarũ, quas in elementari natura & microcosmo excitant, non quidem curiosè & superstitiosè, sed verarũ observationũ & rationalis experientiæ testimonijs, idq; per certas hypotheses artisque principia & Phænomena. Horum principiorũ naturã & demonstrationẽ generalẽ ob oculos ponet doctrina Sphærica. Est enim cœlum vehiculũ divinæ virtutis, quo, mediante motu & lumine stellarũ tanquam causis secundis, Deus cuncta hæc inferiora gubernat & disponit. Astra igitur nobis sunt in signa, videlicet futuræ pestis, belli, penuriæ, morborum, pacis, &c. Non tamen necessitant absolutè, sed conditionaliter, & inclinant fortiter.

In the 7. or last colum of this my Almanacke, in the next page, titled in the head of the Colume, the hour & min. of Sun rising for euery day in the yeare at London: which houres and minutes are halfe the length of the same night. For example: the 5 of Ianuary, the Sunne riseth at London, at 8 of the clocke, and 0 min. after: that length being doubled, makes 16 houres and 0 m n the length of that night. And to know the time of the Sun-setti ng in the same place through the yeere take the houres and min. found in the Almanacke for Sunne-rising from 12. and you shall have the Sun-setting left. which being doubled, is the length of that day. Example: Ianuary the 5 day aforenamed, the Sunne riseth at 8. and 0 min. take 8. from 12. and there resteth 4 houres for Sun set that day, the houre of 4 being doubled maketh 8 houres, the length of that day, and so of all the rest. This is very easie.

Month dayes	Weeke dayes	Feastival daies Terme daies, & their Returnes, with the entrance of the Sun into the signes.	The place of the Moon she is in the Zodiacke every day at noone.	The Aspects of the Moon with the Planets, or her voyd of course, fit for Physitions and Chirurgions.	Ful Sea at London bridge.	The houre & min. of sun rising at London

All Countries can commend Astronomy so high,
But none respects its charge and poverty;
That famous worke, which is in painefull wise,
Compos'd to raise its glory to the skies.

March the moone hath 30 dayes.

It doth deny, the merit of all fame,
Learning must beg, but rich men are to blame,
To gallop up and downe, and post it hard,
My Lord avowes, tis he deserves reward.

Aprill the Moone hath 29. dayes.

Well: Tychobrahe if thou be worldly wise,
Let my too deare bought councell the advise,
Thy Quadrant, exact tables & bookes with darkenes shade
And in thine old age, learne some handy trade.

May the moone hath 30 dayes.

May, tels me I ſhall leaſure have, and fit time,
To talke unto the Muſes, in ſweete rime,
And mid'ſt faire fields, and arbors to adviſe,
The ſtrength of verſe, and rarely Poetize.

Auguſt the moone hath 30 dayes.

This month good husbandmen by tilling of the land,
They juſtly get, by labour of their hand;
And through the ſweat which iſſueth from their paines,
They reape the harveſt, of their honeſt gaines.

September the moone hath 29 dayes.

When wife ſpeaks moſt, do you leaſt ſpeech afford,
For ſilence cuts a ſhrow, worſe than a ſword,
A froward wife, for very ſpite will cry,
When thy neglect, doth ſcorne her tyranny.

October the moone hath 30 daies.

With love and not with fury, lez her know,
Her errors ground, for thence amendments grow,
A gentle hand, a Colt doth sooner tame,
Then chaines or fetters, which do make him lame.

December the moone hath 30 dayes.

Both Sun and Moone, and every mooving flame,
Whilſt muſicke words, do iſſue from the ſame,
And if from thence, one ſmile chance to aſpire,
Thonſands of fooles are therewith ſet on fire.

The uſe of this Table with a Caution.

Doe but obſerve in the ſixt columne of the Almanacke the houres and minuts of full-ſea at London-bridge over againſt each ſeverall day of the moneth, to or from which time there noted, adde or ſubſtract ſech houres and minutes as this Table above doth appoint, and the totall of the one, or remainder of the other ſhall be the time of full ſea, at any of theſe places aboveſaid, ſalved the Anticipation or protraction of time, which by the winds, Land-floods, or Moones latitude, may be cauſed, which may be an houre, or ſometimes more or leſſe error, according to their ſcite and quantity, a thing very remarkable of Seamen when they paſſe by any Sands, over any barren haven, or ſuch like.

An Appendix unto the precedent Almanacke, for this present yeere of Grace. M.DC.XXXVIII.

Wherein you may obſerve a briefe Chronology of yeares: A Deſcription of all the Eclipſes of the Sun *and Moone, with a Type of the totall* Eclipſe of the Moone in England this yeere (if the Ayre be cleare.)

Aſtronomicall Calculations: a Chronography of the foure Quarters of this yeare, ſome Phyſicall notes, and notes of Husbandry and Gardening.

Vſefull and pleaſant for all thoſe which are deſirous of ſuch a worke.

By RICHARD ALLESTREE.

God maketh the Lightening with Raine, and bringeth the Windes out of his Treaſuries: Ier. 10. 13. Thus nature is an Order preſcribed and ſet downe by God.

Of all the Eclipses which shall happen this present yeere of our Lord God 1638.

THe two Luminaries this yeere will suffer five times the losse or retection of the light, which they usually impart to the earth, three of the Sunne, and twice of the Moone, whereof the second Eclipse of the Moone will be very conspicuous in our Horizon, but the three of the Sun, and the first of the Moone will not bee seene in great Britaine.

The first Eclipse of the Sunne is on Sunday the fifth day of January, at 6 of the cloche in the morning, to be seene in Persia, Cassania, within India, and without Ganges in great Tartaria and China, not in England.

The second Eclipse of the Sun is upon Sunday, the first day of July, to be seene neere the Magellanick straites, and the gulfe of Sebastian: not in great Britaine.

The third Eclipse of the sunne is upon Sunday the 25 of November, according to our English account; to be seene in the Country under the Pole Antartick, in the innermost parts of Magellanica: but not in great Britaine.

The first great and totall Eclipse of the Moone not visible to be seene in our Horizon in England, will be upon Saturday the 26 of June according to the Roman account, but the 16 day of the same moneth according to our English account. The beginning of this Eclipse will bee 45. minutes after 6 in the morning: at which time the sunne will bee 2 houres, 57 minutes high upon our Horizon, for it doth rise at London the same day at 3 a clock, 48 min. after, (so that the beginning of this Lunar Eclipse falling between Sunsetting it cannot bee seene upon our Horizon in England.) The beginning of her totall darkenesse almost 43 min. after 7 in the morning. The middle of

of her totall darknesse at 17 min. after 8. The first beginning of her recovering her borrowed light almost at 9 a clock. The end of all her darknesse at 49 min. past 9. From the beginning to the end is 3 hr. 4 min. 18 sec.

The second Eclipse of the Moon will be totall, and will be apparantly seene in great Britaine, if the ayre be cleere on Tuesday the 11 day of December, according to our English account, but the 21 of the same moneth according to the Roman.

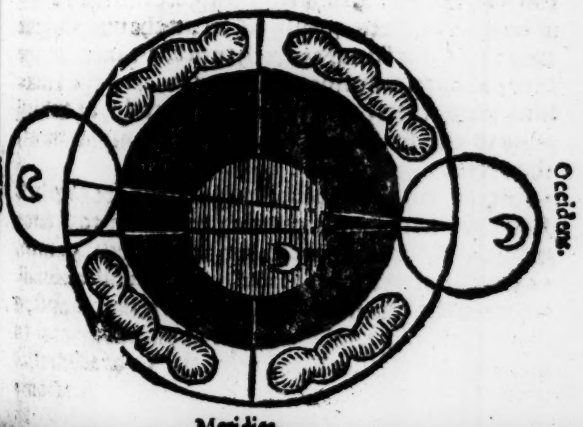
The beginning of this Eclipse will be at 9 min. after midnight, or in the morning.

The middle of her totall darknesse at 2 a clock.

The whole of her totall darknesse at 47 minutes past 2 a clock.

The end is at 52 min. after 3. From the beginning to the end is 3 houres, 42 minuts. The points or digits Eclipsed is 18. ferè. The Sunne being in the 29 degrees, 25 minutes of Sagitari. And the Moone in the 29 degree, 25 minuts of Gemini, not farre from the Dragons tayle.

Figuræ defectus.



A Chronography of the 4. Quarters of this present yeere. 1638.

The Hyemall Solstitiall, or winter Quarter doth begin Astronomically, the last yeere 1637. Dec. 12, at 3 a clocke, 34 min. in the morning, at what time the Sun entred into the 1. min. of the imaginary signe of cold & earthly Capricorne, being then declined from the Æquinoctiall, according to the observation of Tycho de Brache, 23 degrees, 31 min 30 sec. to the Southwards: at which time the dayes be at the shortest, and nights at the longest with us in England.

2 Æquinoctium vernum: or our Spring Quarter, beginneth with us Astronomically the 21 day of March this yeere, at 7 a clock, 27 min. 45 seconds in the morning: at what time the never resting Sun entreth into the Æquinoctiall ayre signe Aries, making the day equall with the night, that is, betweene Sun-rising, and Sun-setting, and Sun-setting and Sun-rising.

3 Solstitium Æstivum: or our Summer Quarter with vs according to Astronomy, begins the 12 day of June, at 1 a clock, 49 min. 26 sec. in the morning: at what time the Sunne entreth into the 1 min. of the imaginary cold and moyst signe Cancer, then making his greatest Northerne declination, at which time is our longest day and shortest night in all the yeere.

4 Autumnall Æquinoctiall, our Autumne or Harbest Quarter with vs, beginning according to Astronomy, the 13 day of September at 1 a clock, 55 min. 54 seconds afternoone, Titan, or Lux publica mundi, entereth the 1 min. of the imaginary, hot, moyst, & aiery signe Libra, which maketh againe our nights and dayes equall, or alike, as on the 21 of March.

Anatomy

Anatomy of wonder great I ſpeake,
and yet am dead,
Men ſuck ſweet juice from theſe black veines,
which mother Wiſedome bred.

Preſages of weather, by the Raine-bow.

THE naturall ſignification of the Rain-bow is every whit ſtrong to ſhew raine either paſſed, or to come: for if it ſtay or abide in the midday, or noone-tide (which it cannot do except in the night) ſhee giveth then warning of very great raine to come; if ſhe be obſerved to be ſeene in the Weſt, ſhee giveth warning of thin & ſmal raine to come ſhortly: But if ſhe be ſeene in the Eaſt, ſhee ſignifieth raine paſt by and by, and that it will quickly ceaſe, and faire and cleere weather to come. Alij ſcaffemon: If the Rain-bow ſhal be ſeene before noon, ſheweth the matter of raine to be conſumed: If ſhee ſhall be ſeene after noone, or about mid day, ſhe declareth that raine is at hand, for becauſe that the vapours be not as yet diſſolved or waſted. If two Raine-bowes appeare at one time, they give warning of raine within 1 or 2 dayes after. A Rain-bow preſently after long raine, ſheweth faire weather preſently after. Ariſtotle ſaith, Met. 3. Chap. 5. Iris duplex eſt, ſolaris & Lunaris. Illa frequens eſt, hæc riariſſima. But let everyone that readeth this, aſſure themſelves for truth, that in the yeere 1632. December, the 16, being Sunday at night, betweene 6 and 7 a clocke after ſunne-ſetting, when the ſunne was gone downe, off of our Horizon, 2 houres, 30 minutes: my ſelfe with one Gentleman being together, did ſee a very faire Raine-bow, juſt oppoſite againſt the Moone, ſhee being Weſt and by North. Wee had much ſmall milling raine, and much winde for many dayes after.

Predictions of weather, according to holy Scripture.

1. A Cloud rising out of the West it foreshewes raine, Luke 12. 54.

2. And when ye heare the South wind blow, ye say, there will be heat, & it commeth to passe, Luk. 12. 55.

3. When it is Euening, yee say, It will be faire weather, for the skie is red, Mat. 16. 2.

4. And in the morning, It will be foule weather to day, for the skie is red and lowring, Mat. 16. 3.

5. South winde or heate in the Summer, procureth whirlewinds, Iob 37. 17.

6. Colde in the North, prediceth cold weather, Iob 37. 9.

7. The North wind driueth away rain, Pro. 25. 23.

8. The sweet influences of the Pleiades or 7. Starres in the 14. and 15. degrees of Taurus, with the South bring raine, and the Sunne with Orion in the 17. degree of Gemini, Iob 38. 31. bringeth drought.

Thus wee see the holy Scriptures aduerre this weatherwise: and wee finde the event alwayes true, then iudge not so hardly of Astrology.

The Conclusion, concerning this part of Philosophie.

COElum est omnium populorum concionator, Heaven is a Preacher to all people. Accede itaque, mi condiscipule, & concionem ipsius attente audi. Est autem concio cœli duplex. Nam cœlum primo est testis Dei illustris & magnificus, juxta illud viri cujusdam docte pij elegans dictum: Quid est cœlum, & totius naturæ decor aliud, quam quoddam speculum, in quo summi Opificis relucet magisterium? But there are some great schollers, and many of their followers, which doe iudge Gods power and glory to be depraued, if there be granted any vertue or power, to proceede from the second

cauſes Gods handmaid Nature, I meane the celeſtiall bodies and temperature of the foure prime qualities and elements, Fire, Ayre, Water, and Earth: or that there ſhould proceede any power or helpe lawfull to further or hinder our temporall eſtates in this life for mans bodies, ſpirits, priuately regiments, as from the ſubſtance and qualities of the elementall bodies, but they will haue all things to come vnto vs immediate from God himſelfe (that is to come directly from God vnto vs, without any helpe or thing betweene) not knowing the force of moving, light, influence, and effect of the naturall cauſes or adiunct which are a generation, motion (Geneſis) that is, effect of the naturall, or effect proceeding from the nature of the agent: as, heat begotten in man, this heat is the effect of heat begotten; ſo heat in the water is an effect of the fire, tranſchanging the water, ſo the ſunne is the naturall efficient cauſe of light, (for reaſon) it is day: becauſe the ſunne is aboue the Horizon. Who knoweth not, whether he be Philoſopher, or any reaſonable creature almoſt: but the Almighty God at the firſt when hee made the world (as in Gen. 1. and ſecond Chapter, hee did make all his Creatures, both celeſtiall bodies and creeſtriall; at which time God did giue, and put into them by his diuine power, their influences, qualities, diſpoſitions, and natures; euery one, and gaue them alſo power and commandement to worke at all times to the worlds end, except he commanded them otherwiſe, 2 Pet. 2. 4. and Gen. 2. 4: yea, God gaue to the elements and ſtarres their natures and influences, Canſt thou binde the ſweet influences of Pleiades? or looſe the bonds of Orion? or canſt thou guide Arcturus with his ſonnes? Job 38. 31, 32, 33. And againe, They fought from Heauen, euen the Starres in their courſes fought againſt Siſera, Iud. 5. 20. In conſideration

of

of which reſpects, Nihil agunt cauſæ naturales quod non divinæ Artis ordo præceperit. Natura itaque nihil eſt aliud, quàm organica ordinatio Dei rebus creatis. Againe, Nature is a power or vertue graſted or planted in things, begetting like things of like. And Omne opus Naturæ, est opus intelligentiæ. Nihil enim aliud Planetæ, quàm quod Deus prævideriſt, aut prædeſtinaverit, ſignificant. Philoſophers know ſurely the diſpoſition of naturall things, for they know ſurely that great cold is graſted in ſome parts of the heaven, and ſome Starres according to their motion and ſituation, cauſing much coldneſſe, froſt, ſnow, and boldneſſe in things upon earth: in ſome parts of the heaven great heat, cauſing great heat, thunder and lightning, boldneſſe, fighting, raſhneſſe, and wrath: in ſome parts of the heaven great moiſtneſſe, cauſing great moiſture, inundations, and much diſtemperature and feare, in ſome one berrie, and in ſome another: as all kinde of weather. Or elſe after its owne kinde (as boldneſſe is in a Lion) or ſecundum individuum, as boldneſſe in an harlot, not by mans kinde, but per individuum, being borne at a certain time. Thus they that know not the need of deſire, courage and reaſon, the goodneſſe & effect of power, nor the alterations wrought by the firſt naturall agent of heat, colde, moiſture, and drieth, given and limitted them and us by their and our Creator Deus deorum, and Natura naturans the God of nature, would fruſtrate and nullifie Gods hand-maid, and put out the eyes of our underſtanding if they could. But I would have all ſuch to know: Ars omnis in utilis eſt rebus, quibus deſunt principia naturæ. Wherefore if the Aſtronomer or Aſtrologian, doe ſeduce no man, nor entice any to turne after ſtrange Gods, (that is ſuch as never did make the heavens, elements, foure prime qualities & all the ſtarres) or to ſerve

them, but by the very works of God (after the manner of the Prophets and Apostles) doe (as it were) make demonstration before all men, of the true and living God, which by Astronomical helps in my best perfoyms of any man, by setting forth the glory, honour, and praise of the Omnipotent and true God, and that by the works of God his fine fingers, Psal. 8. 3. When I behold thine heavens, even the works of thy fingers, the Moone, and the Starres which thou hast ordained. And with this following doe I absolutely beleeve, Quin etiam nihil fiein rerum naturâ sine divina providentiâ, Moreover, nothing comes to passe in the nature of things, without the divine providence. Therefore it is God that hath allotted out to every man the time, first of his life and growth, and then of his declining age and death: so that according as hee will either prolong or shorten our life, and cause us to encrease or diminish, &c. So Hee disposeth the second causes, and those meanes whereby hee will bring it to passe. I will not in this place set downe the nature of the foure Complexions and Constitution of the body, but I would have my loving Readers understand, that there is a great difference of Complexion and Constitution, when as the Complexion is onely taken with Hippocrates, Galen, and Avicen, and other learned Phisitions, in the joyning together of divers qualities of the pure Elements in one body: but Constitution containeth not onely the temperature, that never stayeth (as Galen saith) in one degree or sort, but is a great deale more permanent, as the parts universally well fashioned, apt to all good duties, with just members and branches of the body, decent greatnesse, and also the well joyning of them to all actions, which if you seriously marke, you may come to know very neerely, not onely this outward Idea, but also the best nature.

Some

Some observations to be used in Phlebotomy or letting of blood, purging, bathing, and sweating.

Salomon saith, *To every thing there is a season, and a time to every purpose under the Heauen*, Eccles. 3. 1.

LOuing Reader, I wish you to ioyn a compendy booke 1631. with this present, & you shall get light for this your purpose, which you cannot get in any one Almanack yet extant. Sed vt ad rem redeam. Open no vaine, or let out no blood but for iust causes, and then let it be done with due consideration, and aduise of some learned and well practised Phisitian, and at fit times according to the motion of Celestiall bodies. Generally blood may be let out when the Moone is in Ariete, Libra, Sagitt. or Pisc. Particularly for Cholericke persons, when the Moone is in Cancer, Scorpio, or Pisces.

For the Phlegmatick, when the Moone is in Ariete or Sagittario.

For the Melancholick, the Moone in Libra or Aquario.

For the Sanguine, all the former signes are indifferent.

Beware how you let blood when the sunne, or moone, or Lord of the Ascendent is in the same signe that ruleth that part of mans body, if you can know it.

Also, Gemini, Leo, the last 15 degrees of Libra, and the first 15 degrees of Scorpio, with Taurus, Virgo, and Capricorn, are not good when the moone is in them to let blood.

A Caution.

AND as concerning letting of blood, I say, it be for the Pestilence, the Phrenzie, Pleurisie, Squinancie, or for a continuall burning

a continuall head-ach proceeding of Choler, or hot ſuperfluous blood, or for any extreame paine cauſed by heat, choler, or ſuperfluity of blood.

Aman (may not in any one of theſe ſicknesſes) tarry for a choſen day by the Almanack, becauſe the Patient might dye in the meane ſpace, but incontinently with all ſpeed, hee muſt be let blood, unleſſe he be very weake, and like to ſwoune.

Good ſignes for Purging generally, Cancer, Scorp. and Piſces. Particularly, as with potions, and drinks, when the Moone hath her courſe in Scorpio.

Purge with Electuaries, when the Moone is in Cancro. Purge with Pilles, when the Moone is in Ariete, Tauro, and Capricorne.

Take Gargariſmes, when the Moone is in Ariete and Cancro. Preparatives, in Gemini, Libra, and Aquario.

Take Cliſters when the Moon is in Libra and Scorpio.

Stop Whewmes, Fluxes, and Laxes, when the Moon is in Tauro, Virgine, and Capricorne.

Take Purges by Sneezing, the Moon in Cancro, Leo, and Virgo.

Remember, Creſcens enim ☽ humorem auget & corpora implet. Decreſcens minuit & exhaurit: this rule is ſeene to be true in all colde and moyſt things: as Oyſters, Muſſles, all ſhell-fiſh, &c.

Let not the Moone be in ſignes that chew the cud (in the time of giving purging medicines) as Aries, Taurus, and Capricornus, or Leo, or let her not be ioyned in Coniunction or aſpect to a Planet that is Retrograde, not with the aſpect of Saturne, or Mars, for all theſe times ſhe cauſeth the Patient to vomite up the medicine: ſo it doth no good.

Ptolomy ſaith in the 19 of his Centilo. Medicines are not to bee miniſtred when the Moone is ioyned to Iupiter: but the beſt of all to be miniſtred

when

when the Sun and Venus bono aſpectu cum Luna configurati iuvant.

It is beſt to Bath for health, when the Moone is in fiery ſignes, that is, in Ariete, Leone, & Sagittario.

Bathe for cleanlineſſe of body, let the Moone be in Libra & Piſcibus aſpected auſpitiouſly of Venus.

But if the diſeaſe be hot or dry, and requires humectation, as in the Ptiſick, let the Moone be in watery ſignes aſpected of Iupiter or Venus.

For Sweatings, they are of two ſorts, that is, naturall and artificiall: ſo they bee for two cures and purpoſes. The naturall ſweat (good bread being taken in opening the pores) will diſſolve groſſe and thick humours, cleanſe the blood, comfort the ſpirits, put away colde, conſume raide humours, helpe dimneſſe of ſight and the dropſie, &c.

The artificiall ſweat will cleanſe ſcabbes, put away itch, amend dulneſſe in hearing, cale the ſtone, reſolve the congealed and cold Melancholy blood and humours, &c. The beſt ſignes to ſweat in, is when the Moon is in Ariete, Leone, & Sagit.

An Unguent or Plaſter is beſt applied, when the Moone is in the ſigne attributed to the member whereunto it is applied: as the Moone in Capricorn. the knees.

Good for ablactions or weaning of Children, is the Moone be in the laſt quarter, to make them forget the pap or nurſe the better.

Good to give any medicine for to kill the wormes, is the day of the full Moone, the day before, and the day after.

Remember this, that the Moone (in giving of Purging medicines) is better decreaſing then increaſing: principally if ſhee be without the evill rayes, and with the aſpect of Iupiter or Venus: ſhee being retrograde; ſhee not neere the Sunne, nor in the ſocietie of Saturne and Mars.

Some elections or fit times according to to nature, for Husbandry, as Sowing, Planting, Grafting, and Gardening.

The premiſes conſidered in my booke, 1630. The beſt and fitteſt ſeaſon to plant, and graft in, is in the increaſe of the Moone in Tauro, Aquario, or Capricorne: and not aſpected by ☌, □, or ☍, of Saturne, or Mars.

A fit time or ſeaſon to ſet or ſowe all kindes of ſeeds, the Moone being in Ariete, Tauro, Cancro, Virgine, Libra, Capricorno, Aquario, & Piſcibus: But the ſeeds, whoſe rootes be round, muſt be ſowen nigh the full Moone.

A fit time to ſowe all kinde of Corne, when the Moone is in Cancro: if neither ſhee nor the Sun at that time be Eclipſed.

Sowe Onions and Leekes, in February and March, at the wane of the Moone.

Sowe Cabages in February, March, or April, in the wane of the Moone: replant them in the increaſe.

A good ſeaſon to ſowe ſeeds or herbs for ſtore in the increaſe of the Moone, from Febru. unto Iune.

Sowe Cabage, Lettiſe in February, March, or July, in the old of the Moone.

Sowe ſeeds whoſe roots be round, 2 or 3 dayes before the full, but to ſow for ſtore, take the increaſe from February to Iune.

A fit time to gather Apples and other fruits, hearbs and flowers, to haue them in moſt beauty, and greateſt vertue, the Moone at the full.

A fit time to ſowe, or ſet Garlicke, Lettice, Parſnips, Carrets, Peaſe, and Beanes, two dates before or after the full Moone.

A fit time to ſet all kinde of Quick-ſet, from September, till March.

Dung

Dung your land in ye laſt quarter of the [illegible] that weeds may not abound.

Fell Timber for building, from Midſum[mer] Chriſtmas, in the wane of the Moone; & the [bark] to keepe it from rotting and wormes.

Cut Copice or Fewell, in the firſt quarter [of the] Moone. Cut Vines in February or March.

Benusoue trees the laſt quarter of the [Moone] betweene Hollantide and Twelftide.

A fit time to kill fat Swine in the [increaſe] nigh the full Moone; for the larde the better [to] dure the boyling.

A fit time to lib or geld Cattell, [when the] Moone is in the Head, Thighes or Knees.

Whoſoever fall ſick in the houre of Iupiter [he] will recouer his health quickly. This [hath] proued to be true many times: and in the [houre] Iupiter is an excellent houre to vse any thing, [or] take any good thing in hand; if hee be not [in] grade nor combuſt.

God ſave our gracious King Charles.

Soli Deo Creatori, decus & gloria.

FINIS.
